DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/9/2008 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 5, 9, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Goodwin et al. (US Patent Number 5,371,870 hereinafter "Goodwin").

Art Unit: 2184

4. As per claims 1, 5, 9, and 13, Goodwin teaches a method, apparatus, medium, and system for accessing a FIFO memory (FIFO, column 2, lines 47 - 67) from a CPU comprising: receiving one read or write request from the CPU, the read or write request specifying an address (memory requests by CPU for sequential locations within a range, column 4, lines 3 - 38);

determining if the address is within the range of multiple addresses (it is determined whether the memory references are available in the buffer and then checked from the memory, it is already set that the request is within a range of address, column 4, lines 39 - 67, column 5, lines 1 - 8); and

causing the FIFO memory to be accessed whenever the address is within the range of multiple addresses (memory request cache handling further elaborated in column 5, lines 9 - 61), the FIFO memory being identified (memory 18 is direct mapped such that only one cache location is available for a given index number, column 5, lines 1 - 8) by and accessible only through a single address (when subsequent request corresponds to a sequential address deemed a stream, column 4, lines 3 - 38), and reading from or writing to the FIFO memory (read and write requests seen in figure 2) a plurality of times through the single address in response to the one read or write request from the CPU (successive reads, column 10, lines 46 - 58).

Response to Arguments

5. Applicant's arguments with respect to newly amended claims 1, 5, 9 and 13 have been considered but are moot in view of the new ground(s) of rejection.
